The following is an examiner's statement of reasons for allowance:

With respect to the independent claim 1, the claimed features "a database which stores map data of the management area and position data of a tangible object to be managed in relation to attribute data of the object to be managed used for identifying the object to be managed, wherein the portable terminal machine displays a map of the management area in the building and a position of the object to be managed on the map according to the coordinate data in the database transferred from the host computer to the portable terminal machine and the physical surrounding attributes, and wherein the management area in the building contains fixed items and the object to be managed is displayed in reference to the fixed items" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 3, the claimed features "a database which stores map data of the management area and position data of a tangible object to be managed in relation to attribute data of the object to be managed used for identifying the object to be managed, wherein the portable terminal machine includes a data synchronization unit for synchronizing data in the database stored in a data storing unit of the portable terminal machine with data in the database held in the host computer" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 6, the claimed features "a database, which database is output by the host computer on request, in which retrieval information and position information of tangible objects to be managed in the management area are held in relation to each other, the floor map including physical attributes of both the object to be managed and attributes of an environment surrounding the object to be managed, and wherein the one of the floor maps of the management area contains fixed items and the object to be managed is displayed in reference to the fixed items" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 7, the claimed features "arranged to display a position of a tangible object to be managed in relation to a

management area in a building, a map display unit displaying the map of the area and a position of the object to be managed on the map according to the map data and the position data in the database when a match is identified by the searching unit, wherein the management area in the building contains fixed items and the object to be managed is displayed in reference to the fixed items” in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 9, the claimed features “arranged to display a position of a tangible object to be managed in relation to a management area in a building, a map display unit displaying the map of the area and a position of the object to be managed on the map according to the map data and the position data in the database when a match is identified by the searching unit; and a management information display unit for displaying management information of the object to be managed according to the attribute data in the database when the searching unit identifies the match” in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claims 10 and 12, the claimed features “managing data of a tangible object to be managed in a management area of a building, a map display unit displaying the map of the area according to the map data in the database and displaying the position and shape of the object on the map, wherein the management area in the building contains fixed items and the object to be managed is displayed in reference to the fixed items” in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 13, the claimed features “storing a database that includes map data used to display an area of management area of a building in which a plurality of tangible objects to be managed are placed as a map, displaying on the portable terminal the position of the specific object to be managed in the area on the map on the portable terminal according to the map data and the position data read from the database, wherein the management area in the building contains fixed items and the specific object to be managed is displayed in reference to the fixed items” in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record. With respect to the independent claim 17, the claimed features “managed in a specific area of a management area of a building, wherein the map data and the position

data are stored in a database; wherein the management area in the building contains fixed items and the specific object to be managed is displayed in reference to the fixed items" in conjunction with other elements of the independent claims are not suggested, anticipated or found to be obvious over the prior art made of record.

The dependent claims, being definite, further limiting, and fully enabled by the specification are also allowed.
